

Amazon Product Review Analysis using Web Scraping, EDA, Data Visualization & Sentiment Analysis

CodeAlpha Data Analytics Internship Project

Project Overview

This project combines Web Scraping, Exploratory Data Analysis (EDA), Data Visualization, and Sentiment Analysis on product review data. It demonstrates end-to-end data analytics skills using Python.

Tasks Covered

1. Web Scraping
2. EDA
3. Data Visualization
4. Sentiment Analysis

Technologies Used

Python, BeautifulSoup, Pandas, NumPy, Matplotlib, Seaborn, TextBlob

Web Scraping

Data is collected from BooksToScrape (practice scraping website) using BeautifulSoup.

EDA

Dataset structure, missing values, duplicates, rating distribution, and trends are analyzed.

Data Visualization

Bar charts, histograms, and count plots are used to visualize ratings and prices.

Sentiment Analysis

Reviews are classified as Positive, Negative, or Neutral using TextBlob.

Conclusion

The project successfully demonstrates data collection, analysis, visualization, and NLP techniques.
